

Java LinkedList Methods

[< Previous](#)[Next >](#)

All LinkedList Methods

A list of all **LinkedList** methods can be found in the table below.

Some methods use the type of the LinkedList's items as a parameter or return value. This type will be referred to as *T* in the table.

Method	Description	Return Type
<u>add()</u>	Add an item to the list	boolean void
<u>addAll()</u>	Add a collection of items to the list	boolean
<u>addFirst()</u>	Adds an item to the beginning of the list	void
<u>addLast()</u>	Adds an item to the end of the list	void
<u>clear()</u>	Remove all items from the list	void
<u>clone()</u>	Create a copy of the LinkedList	Object
<u>contains()</u>	Checks whether an item exist in the list	boolean
<u>descendingIterator()</u>	Returns an iterator to loop through the items of the list in reverse order

	CSS	JAVASCRIPT	SQL	PYTHON	JAVA	PHP	HOW TO	W3.CSS	C
<u>forEach()</u>					Perform an action on every item in the list		void		
<u>get()</u>					Return the item at a specific position in the list		T		
<u>getFirst()</u>					Returns the first item in the list		T		
<u>getLast()</u>					Returns the last item in the list		T		
<u>indexOf()</u>					Return the position of the first occurrence of an item in the list		int		
<u>isEmpty()</u>					Checks whether the list is empty		boolean		
<u>iterator()</u>					Return an Iterator object for the LinkedList		Iterator		
<u>lastIndexOf()</u>					Return the position of the last occurrence of an item in the list		int		
<u>listIterator()</u>					Return a ListIterator object for the LinkedList		ListIterator		
<u>offer()</u>					Adds an item at the end of the list				
<u>offerFirst()</u>					Adds an item at the beginning of the list				
<u>offerLast()</u>					Adds an item at the end of the list				
<u>peek()</u>					Retrieves the first item in the list Similar to getFirst()				
<u>peekFirst()</u>					Retrieves the first item in the list. Similar to peek()				
<u>peekLast()</u>					Retrieves the last item in the list				
<u>poll()</u>					Retrieves and removes the first item in the list.				
<u>pollFirst()</u>					Retrieves and removes the first item in the list. Similar to poll()

Similar to [removeFirst\(\).](#)

<code>push()</code>	Adds an item to the beginning of the list. Similar to addFirst().	
<code>remove()</code>	Remove an item from the list	boolean <i>T</i>
<code>removeAll()</code>	Remove a collection of items from the list	boolean
<code>removeFirst()</code>	Removes the first item in the list	<i>T</i>
<code>removeFirstOccurrence()</code>	Removes the first occurrence of a specified item in the list	
<code>removeIf()</code>	Remove all items from the list which meet a specified condition	boolean
<code>removeLast()</code>	Removes the last item in the list	<i>T</i>
<code>removeLastOccurrence()</code>	Removes the last occurrence of a specified item in the list	
<code>replaceAll()</code>	Replace each item in the list with the result of an operation on that item	void
<code>retainAll()</code>	Remove all elements from the list which do not belong to a specified collection	boolean
<code>set()</code>	Replace an item at a specified position in the list	<i>T</i>
<code>size()</code>	Return the number of items in the list	int
<code>sort()</code>	Sort the list	void
<code>splitIterator()</code>	Return a SplitIterator object for the LinkedList	SplitIterator
<code>subList()</code>	Return a sublist which provides access to a range of this list's items	List
