

Java Set

[< Previous](#)[Next >](#)

Java Set Interface

The **Set** interface is part of the Java Collections Framework and is used to store a collection of **unique elements**.

Unlike a List, a **Set** does **not allow duplicates**, and it does not preserve the order of elements (unless you're using TreeSet or LinkedHashSet).

Common classes that implement **Set** :

- HashSet - fast and unordered
- TreeSet - sorted set
- LinkedHashSet - ordered by insertion

Tip: Use a **Set** when you need to store unique values only.

Common Set Methods

Method	Description
--------	-------------

`contains()` Checks if the set contains the element

`size()` Returns the number of elements

`clear()` Removes all elements

Set vs. List

List	Set
Allows duplicates	Does not allow duplicates
Maintains order	Does not guarantee order
Access by index	No index-based access

Next, you'll explore the `HashSet` class in detail.

ADVERTISEMENT

A large rectangular advertisement banner for Vistaprint. On the left side, there is the Vistaprint logo, which consists of a blue triangle followed by the word "vistaprint" in a bold, sans-serif font. The rest of the banner is a light gray grid with 3 columns and 3 rows. The top-left cell of the grid is highlighted with a blue border.

ADVERTISEMENT

A smaller rectangular advertisement for Vistaprint. It features a light gray background with a vertical line on the left. On the left side, the text "320,00 kr." is displayed above "Vis nu". On the right side, the text "24 fra 54 32 kr" is displayed. At the bottom, there is the Vistaprint logo. In the top right corner, there are two small icons: a play button and a menu icon.
