

Java Assignment Operators

[< Previous](#)[Next >](#)

Assignment Operators

Assignment operators are used to assign values to variables.

In the example below, we use the **assignment** operator (=) to assign the value **10** to a variable called **x**:

Example

[Get your own Java Server](#)

```
int x = 10;
```

[Try it Yourself »](#)

The **addition assignment** operator (+=) adds a value to a variable:

Example

```
int x = 10;  
x += 5;
```

A list of all assignment operators:

Operator	Example	Same As	Try it
=	x = 5	x = 5	Try it »
+=	x += 3	x = x + 3	Try it »
-=	x -= 3	x = x - 3	Try it »
*=	x *= 3	x = x * 3	Try it »
/=	x /= 3	x = x / 3	Try it »
%=	x %= 3	x = x % 3	Try it »
&=	x &= 3	x = x & 3	Try it »
=	x = 3	x = x 3	Try it »
^=	x ^= 3	x = x ^ 3	Try it »
>>=	x >>= 3	x = x >> 3	Try it »
<<=	x <<= 3	x = x << 3	Try it »

Note: Most assignment operators are just shorter ways of writing code. For example, `x += 5` is the same as `x = x + 5`, but shorter and often easier to read.

Real-Life Example: Tracking Savings

Assignment operators can also be used in real-life scenarios. For example, you can use the `+=` operator to keep track of savings when you add money to an account:

```
int savings = 100;  
savings += 50; // add 50 to savings  
System.out.println("Total savings: " + savings);
```
